Environmental Policy

As a world leading environmental technology company, Dyesol has a deep awareness of the importance of making our footprint on the world and in society one that is positive from an environmental aspect. The Company is highly innovative in seeking new ways to produce materials that reduce input materials, energy use and waste.

Dye Solar Cells utilize the lowest amount of energy for manufacture of any solar cell technology and there is no use of high toxicity chemicals.

The Company has adopted the following approaches to maximize our contribution to the future of the environment.

1. Company facilities are established to high standards of energy efficiency through insulation and use of optimised illumination energy efficient lighting;
2. Air-conditioning use is minimised by time control and is individually controlled to meet specific facility requirements by separation of sections of the offices, production and laboratory facilities
3. Collected storm water is used for watering our gardens;
4. All organic wastes are treated prior to recycling or are distilled on site;
5. Processes and equipments are operated only as required to minimize energy usage;
6. Waste paper is recycled;
7. Our paper, brochures and other marketing materials are recyclable;
8. Our staff are encouraged to use the paper, glass and plastics recycling bins provided;
9. Facilities cleanliness is maintained at a high level;
10. Company vehicles are either hybrid or have high energy efficiency ratings.

Dyesol is a smoke free workplace. There are regulations in place advising avoidance of smoking. Health and safety are our highest priorities for staff and visitors. The Company meets and exceeds all standards required for workplace security.
